

MH SERVICE FORGES PARTNERSHIP WITH SEARCHLIGHT CYBER TO BOLSTER PRESENCE IN MIDDLE EAST AND SOUTH ASIA

Dubai, UAE – 01 August 2024 - [Searchlight Cyber](#), a leading dark web intelligence company, has entered into a strategic partnership with mh Service, a renowned specialist in IT-forensic hardware manufacturing based in Germany. This collaboration will empower mh Service to provide its government, law enforcement, and corporate clients in the Middle East and South Asia with advanced dark web investigation capabilities.

Searchlight Cyber's dark web intelligence products are utilized by governments, law enforcement agencies, and enterprises globally. Their technology has played a crucial role in some of the largest dark web investigations, enabling law enforcement to leverage Searchlight's extensive archive of over 15 years of dark web data collected from marketplaces, forums, and hidden sites.

"We are excited to partner with mh Service, a company highly respected among government and law enforcement agencies for its expertise in digital investigations. These organizations increasingly require dark web investigation tools to combat hidden criminal activities. This collaboration will enable us to deliver our dark web intelligence products to public sector and enterprise organizations in the region,"

– **Felipe Portero, Government Business Executive EMEA & APAC at Searchlight Cyber.**

"We are thrilled to partner with Searchlight Cyber to provide our clients with state-of-the-art dark web intelligence tools. These capabilities are essential for digital investigations as criminal activities increasingly extend into the dark web. We pride ourselves on staying ahead of emerging trends to prepare our clients for future risks. Adding dark web intelligence to our offerings ensures our customers remain at the forefront of combating online criminal activity,"

– **Mohamed Awad Alla, COO at mh Service.**

Jignesh Suba, CEO – South Asia at mh Service, added, "The South Asia region is experiencing rapid growth in digital transformation, making cybersecurity and dark web intelligence more critical than ever. Our partnership with Searchlight Cyber will enable us to offer unparalleled dark web insights and tools to help our clients in South Asia proactively address and mitigate cyber threats."

The agreement with Searchlight Cyber represents a significant milestone in mh Service's efforts to drive innovation and meet the growing demand for digital intelligence solutions in the Middle East and South Asia. By combining their expertise, technology, and market insights, the two companies are well-positioned to deliver transformative solutions that empower organizations to make informed decisions and maintain a competitive edge.

Webinar Announcement:

We are excited to kick off our partnership with a webinar focused on the Middle East region. The dark web presents a significant challenge to law enforcement and investigation teams in the Middle East, Asia, and globally – from the sale of drugs and child exploitation materials to cybercriminal activities on dark web marketplaces. Criminals use networks like Tor and I2P to remain anonymous and operate under aliases, evading police detection. This makes it more challenging for criminal investigators to gather evidence that will hold up in a court of law – but not impossible.

In this criminal investigation webinar, we will demonstrate how automated dark web technology is simplifying the work of both technical and non-technical investigators, and provide an overview of how to conduct complex investigations and bring high-risk criminals to justice.

The webinar will take place on August 21, 2024 at 11AM GST. [Register for the webinar here.](#)

About mh Service:

With 30 years of experience, mh Service is one of today's leading providers of services and products related to IT, mobile phones, and audio-visual forensics, and Europe's only supplier with their own hardware development and manufacturing departments. As partners of all current forensics market leaders, they provide the full range of high-end storage and network solutions, small hand-held devices, workstations, servers, and high-performance multi-processor clusters from a single source, furnishing complete digital forensics laboratories and fully independent mobile labs.
